

Process Analysis: Inbound Customer Call/WhatsApp AI Management

1. Process Identification

- **Process Name:** Inbound Customer Call/WhatsApp AI Management.
- **Product Overview:** Contact Center AI (VoiceGPT)
- **Process Goal/Objective:** To efficiently handle inbound customer inquiries via IVR or WhatsApp, regarding orders, appointments, or general queries, by leveraging AI to provide information, managing appointments, and route appropriate processes or resolutions.

2. Process Scope

- **Start Point:** Customer call inbounds on unified number or reach via WhatsApp. ³
- **End Point:** Various end points including successful appointment management, service cancellation, dropping calls (apology, technical issues), or staging orders for the next stage.
- **In-Scope Activities:** Answering calls via IVR/WhatsApp, validating customer information, checking for existing orders, notifying customers about orders/appointments, rescheduling, cancelling service, handling queries, and reflecting order/appointment status to FSM.
- **Out-of-Scope Activities:** Detailed "Retention Process," "B2B process," "Installation process," and specific logic within "MSTC" or "EBDIAA Stages/M-customer/DC not dispatched."

3. Process Description.

- **Current State Narrative:** The process starts with an inbound customer call or WhatsApp message. The Contact Center AI answers and applies validation. If an order exists, the AI recognizes the order number and notifies the customer. If there is no order, an apology is issued, and the call is dropped. For existing orders, the AI may notify you about confirmed appointments or manage appointments (reschedule/cancel). Various paths exist for dispatching, held stages, and specific queries that lead to further actions or information provision.

- **Key Steps/Activities (Sequential List):**

- **Step 1: Start & Inbound Call/WhatsApp:** Customer initiates contact. AI answers via IVR or WhatsApp.
- **Step 2: Contact Center AI & Validation:** The Contact Center AI is engaged. "Apply order validation process" occurs.
- **Step 3: Check for Order:** A decision point "Has an order" occurs.
 - **If No:** "apology to customer" and "Drop call".
 - **If Yes:** Proceeds to "Contact Center AI" for order recognition.
- **Step 4: Order Recognition & Notification:** AI recognizes order number and answers customer call to notify them about their order or confirmed appointment. The call should be within 1 hour of the shift as existing.
- **Step 5: Dispatch/Appointment Management Decision:**
 - **Path A: "Fiber Install Dispatched" or "Technician visit customer":** Leads to "Reschedule appointment" or "Cancel the service" handled by AI or "Retention Process."
 - **Reschedule:** "AI to reschedule appointment if customer wants to." Decision "Same day?". If "Yes", leads to "Held stage". If "No", leads to "24" and back to "Held stage" (implied loop for next day or later).
 - **Cancel Service:** Leads to "Retention Process By AI".
 - **Path B: "EBDIAA Stages/M-cust/DC not dispatched" (or MSTC/Query):**
 - "AI to recognize the stages and perform" (implies action based on recognized stage).
 - "Appointment Management": "AI to manage appointment based on customer performance and FSM appointment rule."
 - "Cancel Service" leads to "Retention Process By AI".
 - "AI to notify customer that technical team is working on his order" and "Drop call".

- "Query": "AI to answer customer query/answer related to order information, should be able to respond to the customer." "AI to stage the order to next stage if needed or update FSM."

- **Roles and Responsibilities:**

- **Customer:** Initiates contact, provides information, makes decisions (reschedule/cancel).
- **Contact Center AI:** Answers calls, validates orders, recognizes order/appointment details, provides notifications, manages appointments (reschedule/cancel), handles queries, notifies about order status, stages orders, updates FSM.
- **Technician:** (Implied) Involved in dispatch and visits.
- **FSM (Field Service Management):** System to be updated/reflected with appointment and order status.

- **Systems/Tools Used:** Inbound IVR, WhatsApp integration, Contact Center AI, FSM.

- **Documents/Forms Used:** Customer order information, appointment schedules. ²⁵²⁵²⁵²⁵

- **Key Inputs:** Inbound customer calls/WhatsApp messages, customer order numbers, customer queries.

- **Key Outputs:** Confirmed/rescheduled/canceled appointments, order status information, resolved customer queries, updated FSM.
